> CORPORATE OVERVIEW

TSI Turtle Services (TSI) provides consulting and technology services that focus on the technological convergence of the Enterprise with its Industrial Infrastructure (Plant Floor). We know from experience that the effective utilization of technology is essential to any organization that wants to comply with regulatory/environmental demands, gain a strategic advantage, or maintain a competitive position.

Convergence of the Industrial Infrastructure with the Enterprise is here and now. Business challenges exist across the integrated Enterprise and require management as a complete system or facility, not as an island. At TSI, we implement consistent procedures and policies so that standardization becomes normal practice. Our strategy is to integrate and transform existing standards and policies to adapt to your Industrial Infrastructure in order to meet the challenges of the business.

Too often, we have found that Enterprise personnel are not familiar with the Industrial Infrastructure on the Plant Floor and, similarly, plant personnel may not have the Enterprise experience. The technologies are different, the personnel are different, but the business needs are the same. Our solutions experts bridge that gap while also providing strategy support and project management.
